

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning on page 2, line 10, as follows:

~~In order to solve the above object, according to the present invention, there is provided a device for dispensing medicine including a dispensing device body, a cassette fixed removably to the dispensing device body in order to contain medicines while arranging, and pushing means for pushing out the medicines in the cassette toward one end side, the cassette including a cover and a stopping/receiving part disposed internally in the longitudinal direction, and the pushing means including an abutting part contained in the cassette and abutting against the medicines, a biasing part for biasing the abutting part against the medicine, and a stopping part stopping at the stopping/receiving part of the cassette only when the cover is opened.~~

In order to solve the above object, according to the present invention, there is provided a device for dispensing medicine including a dispensing device body, a cassette fixed removably to the dispensing device body in order to contain medicines while arranging, and pushing means for pushing out the medicines in the cassette toward one end side, the cassette including a cover to arrange the contained medicines and a stopping/receiving part disposed internally in a longitudinal direction, and

the pushing means including an abutting part contained in the cassette and abutting against the medicines, an biasing part for biasing the abutting part against the medicine so as to press and arrange the medicines from one end side, and a stopping part stopping at the stopping/receiving part of the cassette only when the cover is opened so that the abutting part is prevented from pressing the medicines in conformity to biasing force of the biasing part, wherein when the abutting part is moved, the stopping part is released from the stopping/receiving part and the abutting part is moved to an arbitrary position so as to allow positioning.
